Appendix E Anglian Water Records and Correspondence

(c) Crown copyright and database rights 2019 Ordnance Survey 100022432

Date: 17/09/19 | Scale: 1:1250 | Map Centre: 542651,258436 | Data updated: 02/09/19 | Our Ref: 333447 - 2 | Wastewater Plan A0

This plan is provided by Anglian Water pursuant its obligations under the Water Industry Act 1991 sections 198 or 199. It must be used in conjunction with any search results attached. The information on this plan is based on data currently recorded but position must be regarded as approximate. Service pipes, private sewers and drains are generally not shown. Users of this map are strongly advised to commission their own survey of the area shown on the plan before carrying out any works. The actual position of all apparatus MUST be established by trial holes. No liability whatsoever, including liability for negligence, is accepted by Anglian Water for any error or inaccuracy or omission, including the failure to accurately record, or record at all, the location of any water main, discharge pipe, sewer or disposal main or any item of apparatus. This information is valid for the date printed. This plan is produced by Anglian Water Services Limited (c) Crown copyright and database rights 2019 Ordnance Survey 100022432.This map is to be used for the purposes of viewing the location of Anglian Water plant only. Any other uses of the map data or further copies is not permitted. This notice is not intended to exclude or restrict liability for death or personal injury resulting from negligence.

To: Hartley, Michael
Subject: RE: Request for Flood Data: Land North of Barton Road, Cambridge

Dear Mr Hartley

Thank you for your email for request for Flood Data: Land North of Barton Road, Cambridge

Anglian Water is able to confirm that we have no records of flooding in the vicinity that can be attributed to capacity limitations in the public sewerage system. It is possible that other flooding may have occurred that we do not have records of, other organisations such as the Local Authority, Internal Drainage Board or the Environment Agency may have records

Regards

Subject: Request for Flood Data: Land North of Barton Road, Cambridge

EXTERNAL MAIL **- Please be aware this mail is from an external sender - THINK BEFORE YOU CLICK**

Dear Sir/Madam

PBA, part of Stantec has been commissioned to undertake a Flood Risk and Drainage Appraisal at Land North of Barton Road, Cambridge (National Grid Ref: 542248E, 257560N). Nearest post code: CB23 7AU. A site location plan is attached.

Could you please provide us with any information in your possession regarding any incidences of, or possible problems with, flooding associated with your foul, surface water and land drainage in the area of the site?

Kind regards,

Michael Hartley
Assistant Engineer

Our ref EAn/2019/142269

Date 08 October 2019

Dear Mr Hartley

Enquiry regarding Product 4 and other information for Land North of Barton Road, Cambridge.

Thank you for your enquiry which was received on 11 September 2019.

We respond to requests under the Freedom of Information Act 2000 and Environmental Information Regulations 2004.

The information we hold for Product 4 and a copy of the Flood Risk Assessment (FRA) advisory note are attached to my email.

The maps provided are to be used in conjunction with the Datasheet. Please read the Datasheet and take note of information contained within the 'Important Information' section.

Further Asset Management Data and Information can be found online using this link: https://environment.data.gov.uk/asset-management/index.html

Name	Product 4
Description	The Flood Map for Planning (Rivers & Sea) can be viewed and downloaded as a Pdf file on Gov.UK by following this link: https://flood-map-for-planning.service.gov.uk
Licence	Open Government Licence
Information Warnings	None
Information Warning - OS background mapping	*The mapping of features provided as a background in this product is © Ordnance Survey. It is provided to give context to this product. The Open Government Licence does not apply to this background mapping. You are granted a non-exclusive, royalty free, revocable licence solely to view the Licensed Data for non-commercial purposes for the period during which the Environment Agency makes it available. You are not permitted to copy, sub-license, distribute, sell or otherwise make available the Licensed Data to third parties in any form. Requirements

You will need to assess the impact of climate change on flood risk as part of your FRA for this site. Depending on the scale and type of development proposed, if any built development or ground raising is proposed within or in close proximity to Flood Zone 3 then detailed modelling may be required to assess the impact of climate change on modelled flood levels using appropriate climate change allowances. The attached East Anglia Climate Change Allowances Guidance provides further advice on this.

Any works within 8m of a main river will require a flood risk activity permit from the Environment Agency.

Long Term Flood Risk Information

Long term flood risk mapping including: ***Risk of Flooding from Rivers or the Sea***, ***Flood Risk from Surface Water*** and ***Flood Risk from Reservoirs*** can be viewed on GOV.UK: https://flood-warning-information.service.gov.uk/long-term-flood-risk/map

Groundwater flooding

We do not produce flooding reports for groundwater and we do not have any records of flooding at this location. Some groundwater flooding incidents are reported to us and we have recorded them in our files. However, not all incidents are reported therefore there may have been many more incidents of groundwater flooding that we are not aware of. These reports are also uncorroborated and we have not visited the site to confirm the situation on the ground. Groundwater flooding is also confused with poor surface water drainage therefore we cannot guarantee the source of the water is groundwater flooding.

We would suggest that you contact the Lead Local Flood Authority (LLFA) who hold records on reported incidents of groundwater flooding. The LLFA is either the unitary authority or the county council for the area.

Additionally, more information on groundwater flooding can be found on:

- The British Geological Survey website (available at: http://www.bgs.ac.uk/research/groundwater/flooding/groundwaterHomesFAQ.html; and
- The Environment Agency website (available at: https://www.gov.uk/government/publications/flooding-from-groundwater.

Regional Groundwater Levels and Flow Direction

We do not produce Hydrogeological maps. However, there are Hydrogeological maps available from the British Geological Survey which can be found here: http://www.bgs.ac.uk/research/groundwater/datainfo/hydromaps/home.html.

Groundwater level data from the site at TL4166656737 is attached to our email

Data Available Online
Many of our flood datasets are available online:

- Flood Map For Planning (Flood Zone 2, Flood Zone 3 ,Flood Storage Areas, Flood Defences, Areas Benefiting from Defences)
- Risk of Flooding from Rivers and Sea
- Historic Flood Map
- Current Flood Warnings

What's In Your BackYard (WIYBY) is no longer available
Most of the data is still available via other sharing services such as DATA.GOV.UK, MAGIC map and new GOV.UK digital services. Where the datasets are no longer available as maps, you will be able to download and use within specialist applications.

To find out all the services the Environment Agency have available, please click here.

For any other enquiries please send your request to us at:
Enquiries_EastAnglia@environment-agency.gov.uk.

Additional information

Please be aware that we now charge for planning advice provided to developers, agents and landowners. If you would like advice to inform a future planning application for this site then please complete our https://www.gov.uk/government/publications/pre-planning-application-enquiry-form-preliminary-opinion and email it to our Sustainable Places team at planning.brampton@environment-agency.gov.uk. They will initially provide you with a free response identifying the following:

- the environmental constraints affecting the proposal;
- the environmental issues raised by the proposal;
- the information we need for the subsequent planning application to address the issues identified and demonstrate an acceptable development;
- any required environmental permits.

If you require any further information from them (for example, a meeting or the detailed review of a technical document) they will need to set up a charging agreement. Further information can be found on our website.

Please note we have published revised climate change allowances, which are available online. These new allowances will need to be reflected in your Flood Risk Assessment. If you want to discuss this please call our Sustainable Places team on 020 8474 5242.

Please get in touch if you have any further queries or contact us within two months if you'd like us to review the information we have sent.

Yours sincerely

Information

Model Tolerance - Any data included in this product is subject to a standard modelling tollerance of +/- 150mm.The fluvial models used to produce these results are intended for strategic scale use only.

Flood Risk Assessments - The Environment Agency recommends any Flood Risk Assessment should only consider these results in the context of a site specific assessment.

AEP - Annual Exceedance Probability - The probability of a given event occurring in any one year. Please note this is not a return period.

Strategic Scale Model - This model has been designed for catchment wide flood risk mapping. It should be noted that it was not created to produce flood levels for specific development sites within the catchment. Modelled outlines take into account catchment wide defences if present.

Datasheet - Product 4

20 September 2019

Reference Number	142269
Site	Land North of Barton Road, Cambridge
Customer	Michael Hartley
NGR	TL4225257559

This datasheet provides supporting information for your Product 4. It will be clearly indicated if we are unable to provide information to fulfil any part of your request.

Model Summary

Model Name	Model Code
Gough Way Model	EA052383

Important Information

The following information should considered when using the material provided to fulfil this request.

Information	
Limited Modelled Extents Provided	We have only provided a limited number of modelled flood extents for clarity. If you require further extents we will be happy to provide them.
Ordinary Watercourses	Some watercourses in this area are Ordinary Watercourses (non main). Please contact the relevant Lead Local Flood Authority (LLFA) or Internal Drainage Board (IDB) for more information on these.
Flood Risk from Multiple Watercourses	The fluvial flood risk for this location is from multiple watercourses. All sources should be taken into consideration when producing a flood risk assessment.

Modelled Water Levels and Flows

The following tables provide modelled in channel water level and flow values. Values are provided for Annual Exceedence Probability (AEP) events, which is the probability of a given event occurring in any one year. This is not a return period.

The fluvial models used to produce these results are intended for strategic scale use only.

If the tables show a value of -9999, this indicates that we have no level or flow data for that particular AEP or node point.

Level Data

Level values are measured in metres above Ordnance Datum (m aOD).

All level data included are subject to standard modelling tolerance of +/-150 millimetres.

Recorded Flood Events

Where included, the Recorded Flood Event Outlines map provides an indication of areas which have flooded. Not all properties shown to be within the outline will have flooded.

Flood Event	Start	End	Source	Cause
Oct 2001	21/10/2001	24/10/2001	Main River	Channel Capacity Exceeded (no raised defences)
May 1978	05/05/1978	08/05/1978	Main River	Channel Capacity Exceeded (no raised defences) / Local Drainage/Surface Water / Obstruction/Blockage - Bridge

Information

Recorded Outlines - The recorded flood outlines provided are only indicative and may not accurately represent the area that flooded in the named events. Our historic flood event outlines do not provide a definitive record of flooding. It is possible that there will be an absence of datail places where we have not been able to record the extent of flooding. It is also possible for errors occur in the digitisation of historic records of flooding.

Recorded Outlines - There may be other flood events that have occurred that we have not been able to produce an outline for.

Recorded Outlines - The historic flood event outlines are based on a combination of anecdotal evidence, Environment Agency staff observations and survey.

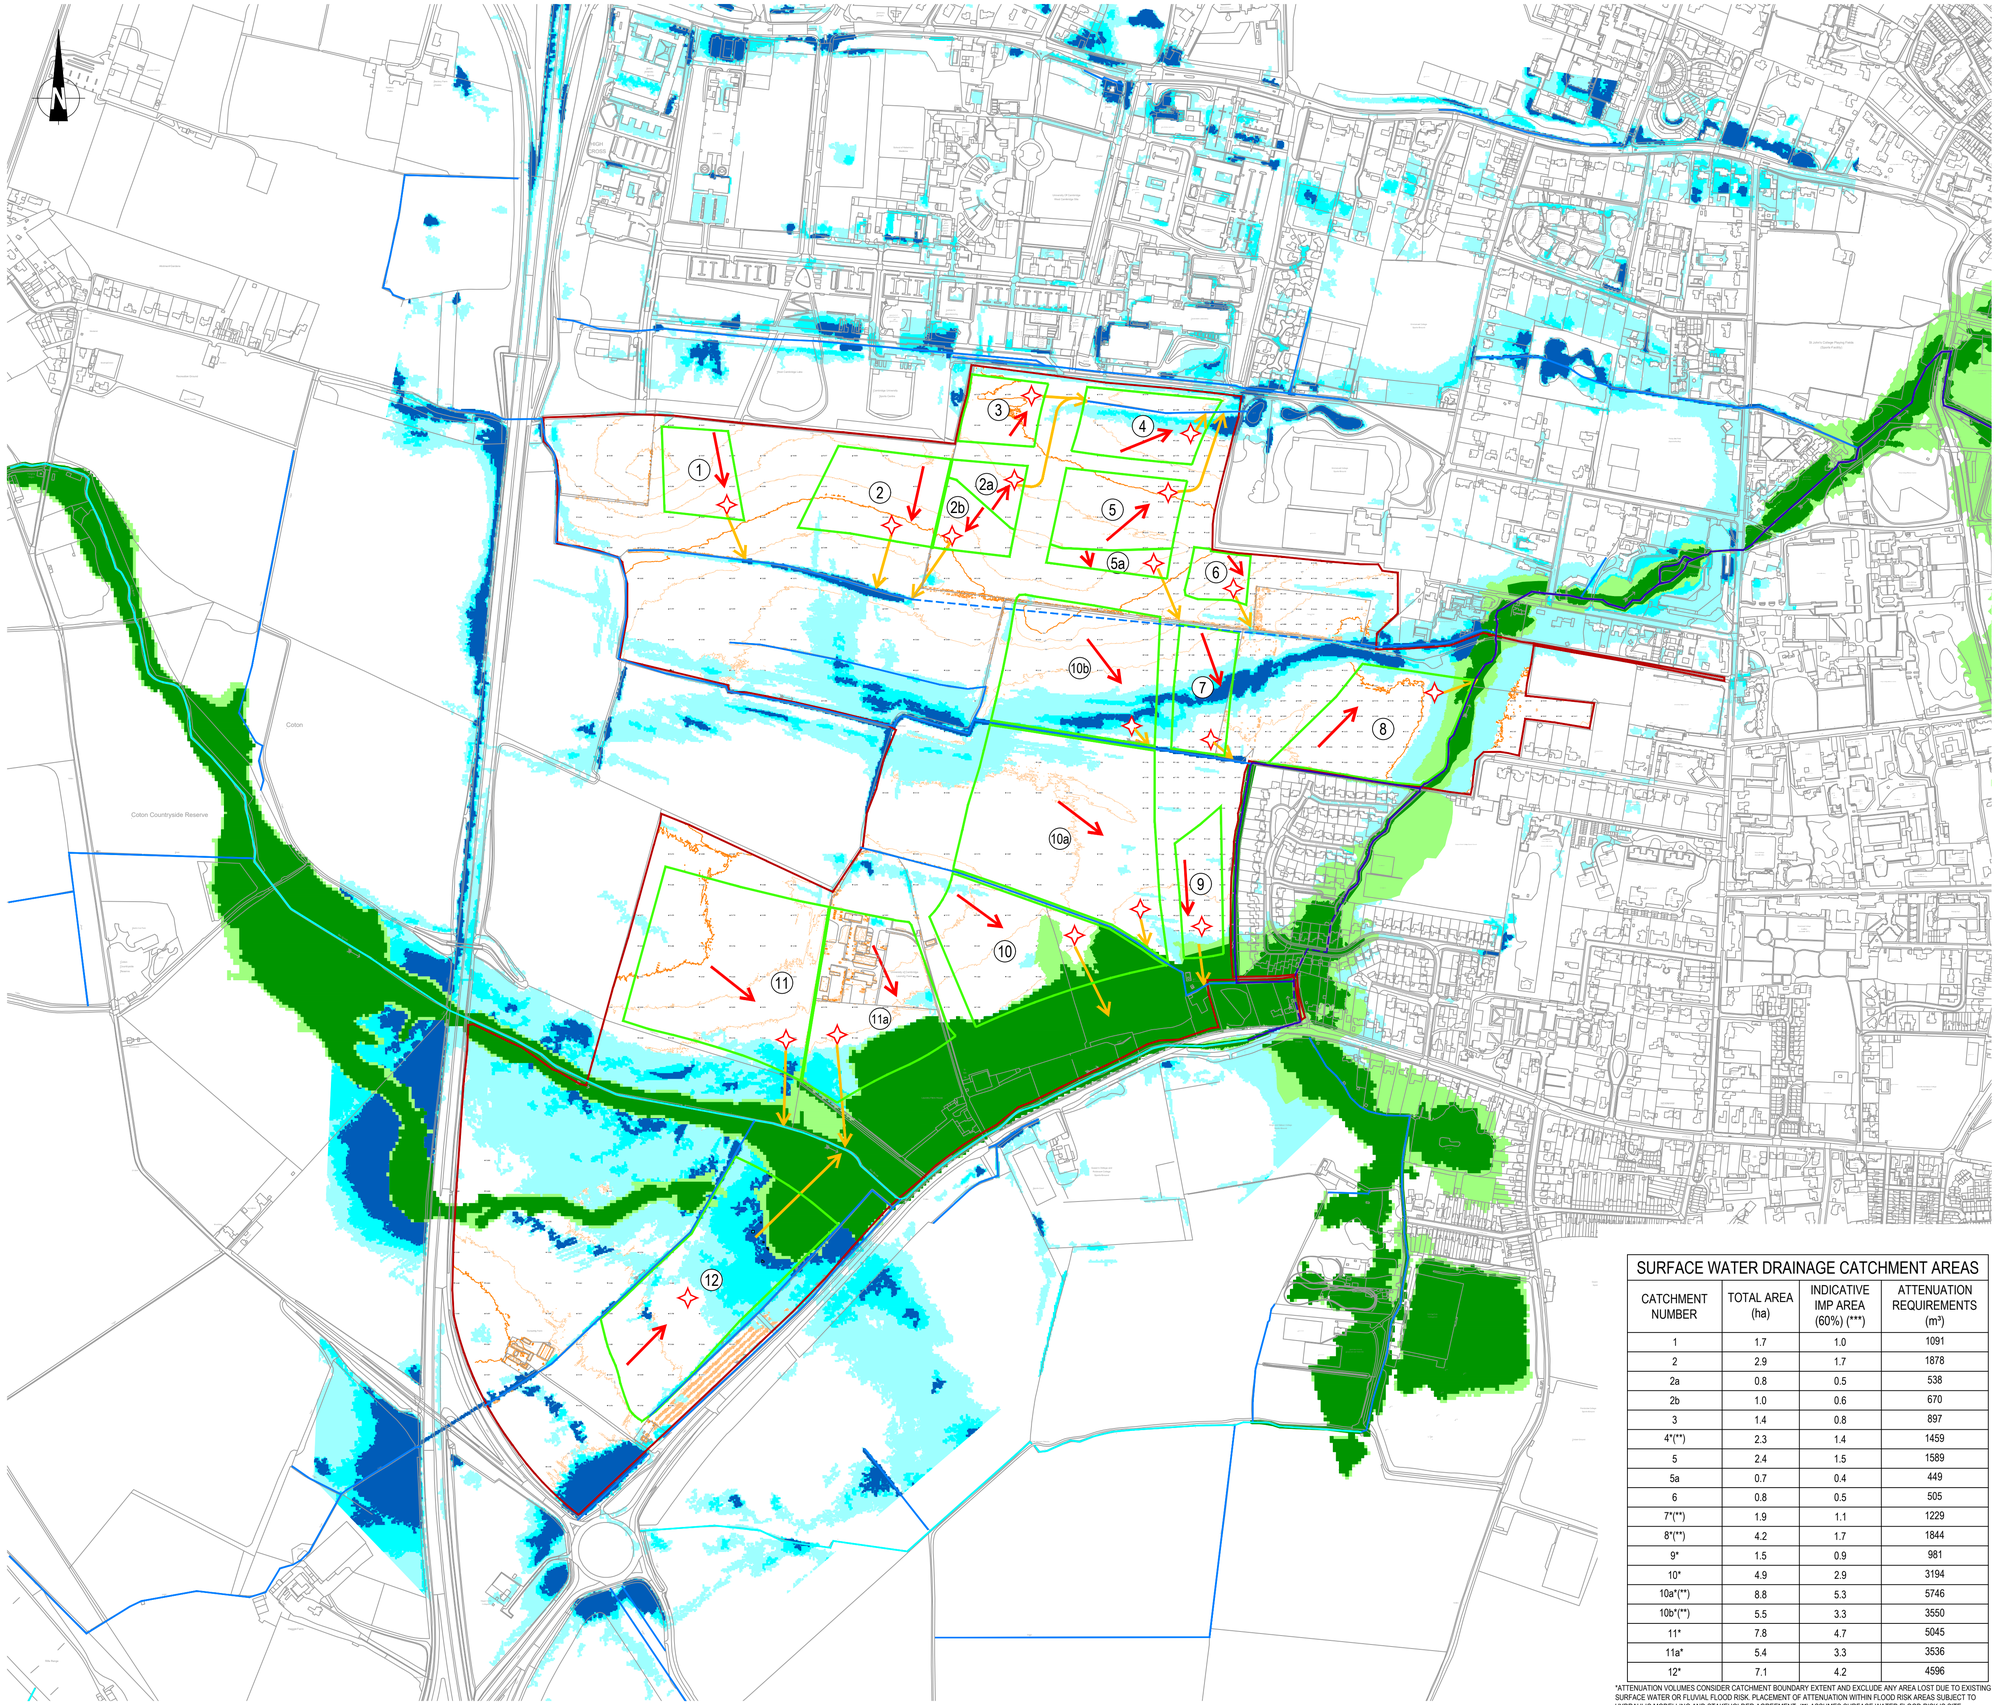
Appendix I High Level Drainage Strategy Drawing



NOTES

1. ALL DIMENSIONS ARE IN MILLIMETRES UNLESS NOTED OTHERWISE.
2. ALL LEVELS ARE IN METRES RELATIVE TO ORDNANCE DATUM NEWLYN UNLESS NOTED OTHERWISE.
3. ALL COORDINATES ARE IN METRES RELATIVE TO ORDNANCE SURVEY NATIONAL GRID.
4. THIS DRAWING IS TO BE READ IN CONJUNCTION WITH ALL ENGINEERS AND ARCHITECTS DRAWINGS AND SPECIFICATIONS.
5. THE LOCATIONS OF THE ATTENUATION BASINS ARE INDICATIVE ONLY AND WILL NEED TO BE REVIEWED AGAINST A TOPOGRAPHIC SURVEY AND DETAILED MODELLING OF THE WATERCOURSES. FURTHER ATTENUATION BASINS ARE LIKELY TO BE REQUIRED.
6. UPSTREAM SUDS WILL NEED TO BE PROVIDED IN ACCORDANCE WITH CURRENT GUIDANCE.
7. ATTENUATION REQUIREMENTS HAVE BEEN CALCULATED USING QUICK STORAGE ESTIMATES WITHIN MICRODRAINAGE SOFTWARE.
8. OUTFALL LEVELS TO DITCHES ARE UNKNOWN AND DESIGN ASSUMES GRAVITY DRAINAGE CAN BE ACHIEVED.
9. SIZING OF BASINS/ATTENUATION FEATURES WITH CORRESPONDING EARTHWORKS IS EXCLUDED.

SCALING NOTE: Do not scale from this drawing. If in doubt, ask.
UTILITIES NOTE: The position of any existing public or private sewers, utility services, plant or apparatus shown on this drawing is believed to be correct, but no warranty to this is expressed or implied. Other such plant or apparatus may also be present but not shown. The Contractor is therefore advised to undertake their own investigation where the presence of any existing sewers, services, plant or apparatus may affect their operations.

FEH Greenfield Runoff
Per Hectare
Using 2008 QMED Equation

Project Title	Land North of Barton Road, Cambridge
Project No	47115

Methodology as set out in SuDS Manual 24.3.2 — SUDS Manual Chapter 24

1 Retrieve FEH Catchment Information

Export catchment data from FEH CDROM as .csv file and save in FEH data export

Catchment Descriptors	**BFIHOST**	0.280		*see note 1*
	SAAR	538.0		*see note 1*
	FARL	1.0		*see note 2*

2 Derive QBAR (mean annual flood)

Define area	**Site Area**	1.0	ha	
	Applied Area	50.0	ha	*see note 3*
FEH Index Flood (SuDS Manual Equation 24.2)	**QMED (Q_2)**	2.2	l/s	*see note 4*
Calculate QBAR by dividing QMED by 2yr growth factor	**QBAR**	2.5	l/s	*see note 5*

3 Select appropriate growth factors

FSR Hydrological Region		5	*(refer to FSR Hydrological Region tab)*
100yr Growth Curve Factor	**GQ_{100}**	3.56	
30yr Growth Curve Factor	**GQ_{30}**	2.55	
10yr Growth Curve Factor	**GQ_{10}**	1.65	
2yr Growth Curve Factor	**GQ_2**	0.89	
1yr Growth Curve Factor	**GQ_1**	0.87	

4 Derive Flood Frequency

Greenfield Runoff per 1ha

100yr Peak Runoff Rate	**Q_{100}**	8.9	l/s	**Q_{100}**	8.9	l/s/ha
30yr Peak Runoff Rate	**Q_{30}**	6.4	l/s	**Q_{30}**	6.4	l/s/ha
10yr Growth Curve Factor	**Q_{10}**	4.1	l/s	**Q_{10}**	4.1	l/s/ha
QBAR Peak Runoff Rate	**QBAR**	2.5	l/s	**Q_{BAR}**	2.5	l/s/ha
2yr Peak Runoff Rate	**Q_2**	2.2	l/s	**Q_2**	2.2	l/s/ha
1yr Peak Runoff Rate	**Q_1**	2.2	l/s	**Q_1**	2.2	l/s/ha

Location of FEH Data (as Hyperlink)

DOCUMENT ISSUE RECORD

Rev	Comments	Prepared	Date	Checked	Date
	Main Site excluding north-east area	MJH	17.09.19	CW	18.09.19

Sheet created by Alex Bearne

Last updated 03.01.18 Recommended Review 01.07.18

Notes This spreadsheet has been created to allow derivation of greenfield runoff rates using the FEH statistical method applied in a manner consistent with the recommendations of the SuDS Manual. If you have recommendations to improve this spreadsheet please contact the owner.

Note 1 FEH Web version 3 allows extraction of BFIHOST and SAAR values for each square kilometre grid If you do not think the BFIHOST value is representative of your site then it is possible to derive it manually. This should only very occasionally be necessary. BFI can be derived manually using the the methodology set out in the Flood Estimation Handbook (see *Manual Derivation of BFIHOST tab).*

Note 2 FARL value is a measure of attenuation from reservoirs and lakes for the majority of studies this should be set to 1 (representing no attenuation). If your site includes a large water body with an attenuating affect on runoff please consult a hydrologist.
FARL is a measurement of studies water bodies in the catchment so that their attenuation effects so this term becomes 1.0 and therefore drops out. (see page 23 of the Preliminary rainfall runoff management for developments EA/Defra 2013)
Rainfall runoff management for developments.pdf

Note 3 If the site area is less than 50 hectare the spreadsheet will calculate QMED for 50ha and scale the results automatically to the defined Site Area

Note 4 QMED is calculated using the statistical equation as revised by Kjeldsen in 2008

$$Q_{MED} = 8.3062AREA^{0.8510} .0.1536^{(1000/SAAR)} .FARL^{3.4451} .0.0460^{BFIHOST\wedge 2}$$

Rainfall runoff management for developments.pdf
It is reproduced as Equation 24.2 in the SUDS Manual (pg 512)

Note 5 QBAR is calculated by dividing QMED by the growth factor for the 2 year event, as per the methodology set out in paragraph 6.2.2 of 'Rainfall runoff management for developments' . QBAR is then used as the index flood for the basis of applying the growth factors.

Checked by Natasha Vaughan, Clare Waller, David Collis
